

PITCHED ROOF MOUNTING SYSTEM

IBC TopFix 100

PRODUCT ADVANTAGES:

Low system costs thanks to modular construction

Easy and quick installation through 4-point fastening

10-year warranty*

Longest service life through use of aluminum and stainless steel (1.4301)

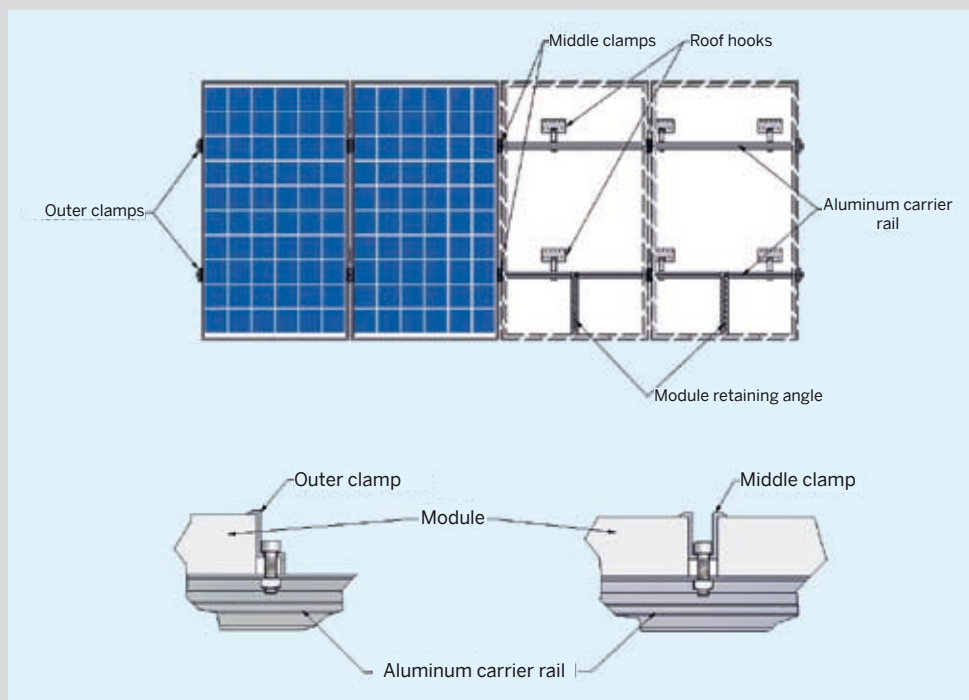

Homogenous, elegant visual appearance of the surfaces

Calculation and dimensioning software according to DIN 1055-4 (03/05) / 1055-5 (07/05)

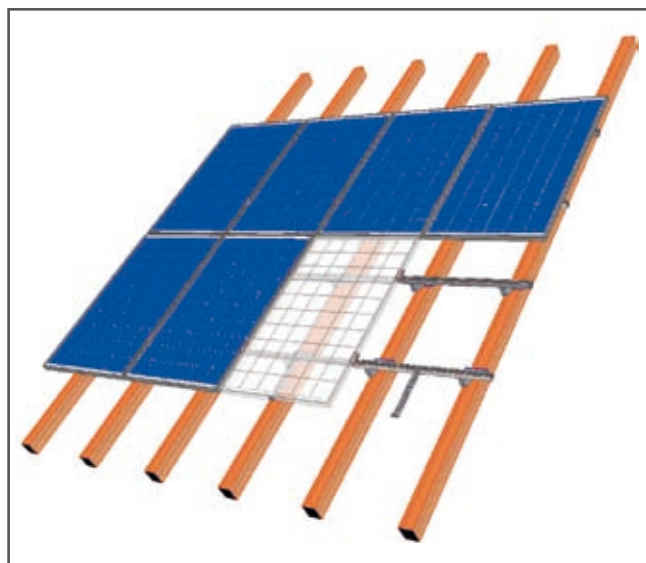

Fast and secure cable arrangement on 39-m rail with integrated cable channel

High level of safety ensured through TÜV certification

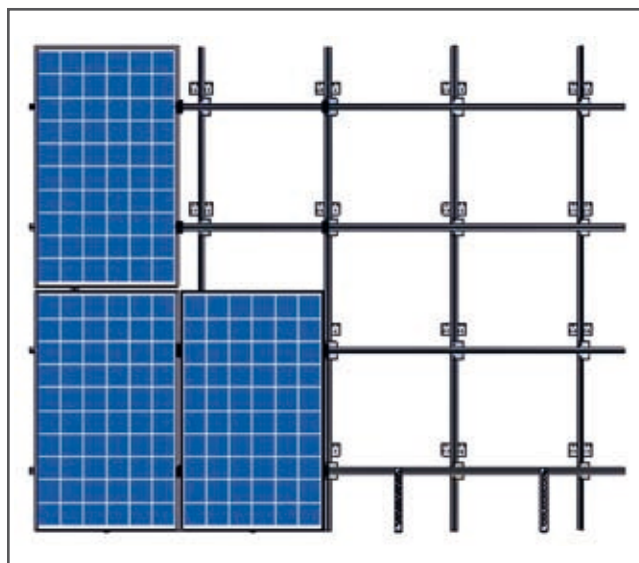

Construction of pitched roof mounting system

Single-layer mounting:

- Fast installation through low number of components
- Minimal material costs
- Cost-effective and economical solution
- Safety tested for statics even for high snow loads
- Can be installed anywhere thanks to its compatibility with the IBC standard support (for flat roof construction)
- Durable and weatherproof components

* Based on the current warranty conditions

Double-layer mounting:

- High flexibility through variable clamping area
- Minimized storage expense with standardized components
- Optimal module clamping based on manufacturer's specifications
- Bridges even large fastening intervals
- Particularly suited to all trapezoidal plate roofs and Eternit corrugated plate roofs in combination with hanger bolts

Subject to technical changes for further improvements.
